symmetry in business & technology

Presents to you our
**Network Security
Tech-Know Workshop**

How serious are you about the security of your network, known security threats, hack attempts and denial of service? Come to our "Tech-Know Workshop" to learn why and how a firewall alone does not make your network secure and how you can get peace-of-mind!

In this Tech-Know session, we cover the finer points of network security. We discuss, in depth, how hackers bypass your firewalls and hack networks. Once you know how networks are hacked, we show you what is needed to make them secure.

This presentation also includes technology demonstrations of Intrusion Detection Systems and Vulnerability Scanners

Presenter: Joel R. Helgeson
SymetriQ's Director of Networking and Security Services

Joel has over 10 years of experience in Network Security, Voice over IP, Local Area, Wide Area and Wireless Networking. Joel is one of the networking industry's leading technology and security consultants.

**CONTINENTAL
BREAKFAST
PROVIDED**

Please RSVP by July 15, to:

Heidi Alm
